

Road safety and risk management

Atkins provides an individually tailored, holistic and empowering road safety service to each client. We work in close partnership with central government, its agencies, local authorities, the emergency services, road users and communities to deliver a best value service to both the UK and international markets.

By considering combinations of education, engineering, training and publicity, our team of experts is able to offer innovative, effective and joined-up solutions to casualty reduction and liability management.

Outputs

We offer a complete road safety service which encompasses managing the safety of people using the highway as well as those working on it. A choice of any number of the individual elements of this service is also available to suit the individual client's requirements. These elements include:

- Development of safety plans, strategies and standards
- Institutional/stakeholder responsibility and strengthening
- Risk forecasts and profiles
- Risk management/liability management
- Data collection, systems and analysis
- Collision investigation
- Road safety engineering
- Design standards
- Road safety audit

- Advice on traffic education, training, testing and enforcement
- Publicity programmes
- Economic justification of solutions
- Responsive monitoring and evaluation
- Expert witness
- Road safety research, training and presentations

Our approach

Atkins understands that road collisions are multi-factor incidents; occurring in various ways from the interaction of the road environment, road users, and the vehicles involved. We therefore take a holistic approach to improving safety and offer bespoke services to suit our clients' needs. We have also developed a rigorous Risk Assessment and Risk Management Process which generates a systematic framework for decision making and demonstration of social, legal and professional duty of care.

Our established business network enables our road safety professionals to meet regularly and share best practice and innovation. Through this network we are able to form multi-discipline project teams which engage and coordinate our widespread road safety expertise both in our UK and overseas offices.

This cross-cutting investment allows us to deliver the best possible service to our clients and enables us to

mobilise project teams to operate locally, addressing local issues, with the support of an international resource and knowledge base. Equally, we are in a position to address national and international safety issues.

Outcomes

We believe that the best results are achieved by working in partnership with our clients. Through knowledge sharing and a multi-disciplinary approach we can offer an innovative and best value service in the field of road safety and risk management, providing a bespoke package which empowers the client.
